Muhammad Jazeel Bin Meerasah

Profile

Staff Platform Engineer with 7 years of experience designing and operating multi-cloud architectures, with deep specialization in AWS. Proven track record in platform architecture, reliability engineering, and developer self-service, supporting multiple product teams in complex, regulated environments.

Certification & Education

AWS Solutions Architect Professional
Jul 2024 — Jul 2027

Certified Kubernetes Administrator
Oct 2022 — Oct 2025

Information Engineering with Media, Nanyang Technological University
Aug 2016 — May 2019

Employment History

Staff Platform Engineer at SPH Media
Dec 2022 — Present

- Played a key role within the platform team in ensuring AWS platform reliability during the Singapore General Election 2025 traffic surge, contributing to 100% uptime through proactive capacity planning, real-time monitoring, and rehearsed incident-response playbooks.
- Led and contributed to cloud transformation initiatives across multiple product units within SPH's digital products group, including infrastructure optimization, workload migrations, and onboarding of new applications.
- Drove platform engineering initiatives within the team focused on developer self-service and standardization, improving deployment consistency and reducing operational friction for supported product teams.
- Contributed and maintained reusable Terraform modules in SPH's internal module registry, and authored public/community Terraform modules adopted beyond the organization.

Adjunct Lecturer / Mentor at Nanyang Technological University
Feb 2023 — Present

- Designed and operated an automated, self-provisioning Kubernetes lab platform (compute, networking, storage, monitoring, logging), reducing classroom setup time by 50% and enabling repeatable, on-demand hands-on exercises.
- Led a zero-to-cloud enablement program for 200+ professionals,

Skills

Cloud Platform: AWS (Extensive), GCP, Azure, Alibaba Cloud

Container Orchestration: Kubernetes (EKS & GKE) & AWS ECS

CI / CD: Github Actions, Jenkins & Hashicorp Cloud Platform

Monitoring & Logging: Prometheus/ Grafana, Cloudwatch & OpenSearch

Infrastructure as Code: Terraform, CloudFormation, CDK, Terragrunt, Ansible

Programming / Scripting: Python, Bash

Secret Management: Hashicorp Vault, AWS Secrets Manager & Parameter Store

Service Discovery: Consul

covering Linux, AWS architecture, Kubernetes, and CI/CD, enabling participants to independently apply DevOps practices within their organizations.
- Established practical delivery guidelines that enabled students to independently build 40+ cloud-native portfolio projects adopted across multiple industry verticals.

Senior DevOps Engineer at CloudCover

Jun 2021 — Dec 2022

- Led a squad of 5 engineers through a successful 6-month rehost and replatform migration of 10+ production e-commerce applications from Alibaba Cloud to GCP, owning cutover planning and execution using Terragrunt, Consul, and Jenkins.
- Orchestrated CI/CD pipelines and templated Helm charts that deployed containerized workloads to GKE for a public sector project.
- Built reusable Terraform modules to standardize infrastructure provisioning across multiple projects and teams.
- Delivered internal enablement workshops on Kubernetes and Infrastructure as Code for engineers across multiple time zones.

DevOps Engineer at Staizen

Jun 2020 — Jun 2021

- Designed and launched multi-account AWS landing zones with guardrails for enterprise clients, enabling first production workloads within 3 months.
- Built reusable infrastructure blueprints and automated dev–test–prod deployments using AWS CDK (TypeScript) and GitHub Actions, reducing manual provisioning effort.
- Implemented federated identity and access management by integrating AWS SSO with Azure AD, standardizing secure access across multiple AWS accounts.

1-year Cloud Engineer traineeship at Aviva Asia

Jul 2019 — Jun 2020

- Worked on Aviva's cloud migration of financial applications and the enterprise data lake, engineering IaC-driven pipelines (Terraform | Ansible | Packer | Jenkins) that met rigorous financial-services compliance while maintaining project transparency via Jira & Confluence.
